

PROPERTY

ALERT: YOU MAY HAVE A POTENTIAL FIRE HAZARD

Independent investigators have advised us that certain fiber bracing (sheathing) materials have been known to spontaneously combust under certain conditions. **We strongly urge you to check with the manufacturers of fiber bracing materials you stock to be certain conditions do not exist that may potentially cause a fire.**

AUTOMOBILE

Vehicle Lighting & Liability

Improper or malfunctioning taillights or turn signals can be a contributing factor in an automobile accident. Drivers should check vehicle lighting each day. If your driver is involved in an accident with another vehicle and believes that the other vehicle did not have properly functioning lights, law enforcement should be called to the scene to verify the condition of the lights. If law enforcement will not come, your driver should attempt to solicit an impartial witness who can verify the conditions.

WORKERS'
COMPENSATION

Machinery: Servicing Equipment

Serious amputations and scalping type injuries have occurred involving machinery incorporating auger type devices. Augers can often jam, requiring an operator to correct the problem. Your safety procedures should require employees to shut down the machine before servicing. Shut-off switches should always be used and in close proximity to auger access panels. These injuries often result in significant permanent impairments to your employee and costly claims.
